<b>Description</b>	VEGFR2 (Vascular Endothelial Growth Factor Receptor 2) is a key tyrosine kinase receptor in vascular endothelial cells. It binds to VEGF, activating pathways like PI3K/AKT and MAPK to regulate angiogenesis, vascular permeability, cell proliferation, and migration. VEGFR2 is crucial for embryonic development and tumor growth, with abnormal expression linked to tumor angiogenesis and invasion, making it a key anti-angiogenesis target. Composed of extracellular, transmembrane, and intracellular domains, VEGFR2 shows abnormal expression in conditions like cancer and ocular diseases. Targeted inhibitors, such as tyrosine kinase inhibitors and antibody drugs, are widely used in clinical therapies, marking VEGFR2 as a focus for cancer and anti-angiogenesis drug research.

## SDS-PAGE

On SDS-PAGE under reducing (R) condition. The gel was stained overnight with Coomassie Blue. The purity of the protein is greater than 90%.

## Bioactivity-ELISA

Mouse VEGFR2 Protein; His Tag (Catalog # GM-87864RP) was immobilized at 2  $\mu$ g/ml (100  $\mu$ L/well).  
 Increasing concentrations of Anti-mouse VEGFR-2 mIgG2a Antibody(DC101) (Catalog # GM-87892MAB) were added.
